

GIVE MOSQUITOES BOUNDARIES

Build a barrier by backpack spraying with Mavrik® Perimeter

Mavrik® Perimeter is a broad-spectrum adulticide that professionals can apply from a backpack sprayer around buildings, on ornamental plants and on outside surfaces to help control mosquito populations. Mavrik® Perimeter kills on contact with a residual and dried residues are non-toxic to bees. It is an easy-to-use option for extending your reach and improving the effectiveness of mosquito control programs.
