APPLICATION INSTRUCTIONS

WASPS AND HORNETS: Hold container in upright position. Stand at a safe distance, 6 - 15 ft from the nest, and not directly underneath. Align nozzle valve opening with the mark on the valve cup. Aim the nozzle valve opening toward the nest with the wind at your back. Treat the nest until thoroughly wet. Contact wasps and hornets on the nest with spray when possible. The best time of day to treat is in evening or early morning, since wasps and hornets congregate on or in the nest at night.

YELLOWJACKETS AND BEES: Locate nest. Align nozzle valve opening directly opposite the mark on the valve cup. Press down on the actuator and apply, using a sweeping motion, contacting any stimulated or stirred-up yellowjackets and bees around the nest opening. Then move forward to the nest opening and apply for 6 - 8 sec directly into the nest hole.

SPIDERS (including Black Widow and Brown Recluse): Apply directly to spiders and/or webbing. Before applying, consider the surfaces that spray may contact if concerned about potential staining.
