

ANTOPIA®

MADE IN THE U.S.A.

Bait Station Operating Instructions

For best results place stations in shaded areas or create shade for the bait station. Avoid placing bait station where it will receive direct sunlight whenever possible.

• For use around structures:

- The number of bait stations to use will vary with the type of ant and the size of the colony. For initial placement, place **one bait station every fifty feet** around the structure to be treated.
- If any of the bait stations are emptied in less than a week, double the initial placement. **Replace baits as needed until feeding activity ceases.**
- The preparations below will help to prevent damage to the bait station.

To Activate and Place the Antopia® Bait Station

- Loosen the soil in the spot where you are going to place the station to a width of about 3" and a depth of about 7" with a garden trowel or small shovel.
- Remove seal at the end of the entry tube to expose the bait station entryway.
- Place the anchor into the soil with a clockwise turning motion until the entryway is level with the soil. If you encounter difficulty in seating the bait station properly, remove it and loosen the soil more thoroughly, then repeat the anchoring process.
- Alternatively, dig a small hole to a depth of 7" place the station in the hole, so that the entryway is level with the adjacent ground, and replace the soil.

To Reuse the

Antopia® Bait Station: If less than six months from the first usage, remove the cap on top and add bait of the same type previously being used. If spill resistance is desired, fill the bait station to approximately seven fluid ounces. If spill resistance is not critical, fill the bait station to the top of the internal spiral with approximately 14 fluid ounces of bait.

If more than six months since the first usage or last

cleaning, empty the bait station completely, dispose of uneaten bait in accordance with label directions, fill the bait station with a mild bleach solution (1% chlorine) and allow to sit at least one hour; empty bait station and dispose of rinsate properly; rinse bait station(s) several times with water, or mild soap and water solution, empty station, dispose of rinsate properly and allow station to dry. Replace lower seal if station is to be transported filled.

Add bait through the top fill port to either the 7 or the 14 fluid ounce level, replace fill port cap and place station as directed on label.
