

Introducing the Power of Dry with new Prescription Treatment® brand Phantom® pressurized insecticide.

Now, control general pests in commercial accounts easier and faster than ever.

BASF Pest Control Solutions
The Evolution of Better Pest Control

BASF

The Chemical Company

When it comes to controlling pests in commercial accounts, new Phantom pressurized insecticide delivers.

- New formulation dries in “crystals” for enhanced bioavailability and faster performance on numerous substrates (porous, non-porous and high organic matter).
- Ready-to-use formulation reduces overuse and eliminates mixing.
- Broad spectrum control for commercial accounts, including bed bugs, ants and cockroaches.
- Approved for food handling uses.
- Leaves no visible residue.
- Reduced pesticide load and precision application that make sense to your customers and for your business.
- System III® compatible.

The Power of Dry: Ordinary Spray vs. New Phantom Pressurized Insecticide

Compared to ordinary sprays that leave a residue, Prescription Treatment® brand **Phantom**® pressurized insecticide delivers the active ingredient more effectively by drying in “crystals” without leaving a visible residue. It also provides superior performance on porous materials because the product remains on surface for pick up and transfer.

New Phantom pressurized insecticide *Ordinary Spray*

Still delivering the trustworthy performance and flexibility that has defined the success of Phantom® termiticide-insecticide.

- Offers long-lasting undetectable control.
- The only undetectable, non-IGR labeled for indoor general pest control including commercial food handling areas.
- Creates an undetectable treatment zone that pests continue to contact.
- Will not disperse or “lock in” pests.
- Pests are exposed to the active ingredient either by ingestion or contact.
- Remains highly effective in high organic matter substrates and is not subject to rapid breakdown with detergents and cleansing agents.
- Effective on pyrethroid-resistant strains of bed bugs and cockroaches.

Beyond Ants, Cockroaches, and Bed bugs

Phantom pressurized insecticide also controls:

- Beetles ■ Centipedes ■ Flies ■ Scorpions
- Spiders ■ Wasps

To learn how to incorporate **Phantom** pressurized insecticide into your commercial program, visit PestControl.basf.us or contact your BASF sales representative.

Always read and follow label directions.
