

## DeltaGard® G - small granule, big time results

### Our new formulation works even harder, so you don't have to.

Stop pests outside before they get in with DeltaGard® G, a convenient granular insecticide with a broad label that provides effective, residual control of a wide variety of crawling pests.

When exposed to moisture, the granules, made with a natural carrier, quickly break apart and disappear releasing the active ingredient, DeltaGard brand deltamethrin, without staining surfaces or damaging plants.

A third-generation pyrethroid, deltamethrin is a single, pure isomer that's 100% active with maximum power to kill pests at lower application rates than the leading competitor.

When your integrated pest management (IPM) program calls for a contact granular insecticide, ask for cost-effective DeltaGard G. It will work for you, your customers and your business.
