

GOOD THINGS COME IN SMALL PACKAGES

1/4 ACRE COVERAGE

- ✓ Durable All-Weather Construction
- ✓ Odor-Free
- ✓ Lightweight and Easy To Set Up
- ✓ Whisper-Quiet – No Zapping Noises

The perfect size to protect urban and suburban yards and patios, the DynaTrap® DT160 operates economically and is easy to set up.

Our award winning DynaTrap® technology uses a 3-way protection plan for insect extermination. A UV-emitting fluorescent bulb produces warm and bright light that attracts insects to the unit. The DynaTrap® also produces carbon dioxide, which is irresistible to mosquitoes. After insects and mosquitoes are lured to the trap, the powerful fan draws them into the retaining cage where they dehydrate and die.

PATENTED DAMPER

The DT160 has a patented feature that prevents insects from escaping when replacing the bulb. The automatic damper closes when the unit is turned off, ensuring any insects still alive in the retaining cage cannot fly away.

FEATURES
